## Amendments to the Claims

1. (Original) A method for preventing unauthorized recording of media content on a Macintosh operating system comprising:

registering a compliance mechanism on a client system having said Macintosh operating system operating thereon, said compliance mechanism comprising:

a framework for validating said compliance mechanism on said client system; and

a multimedia component opened by said framework, said multimedia component for decrypting said media content on said client system; and

preventing decryption of said media content on said client system having said Macintosh operating system operating thereon if a portion of said compliance mechanism is invalidated.

- 2. (currently amended) The method as recited in Claim 1 further comprising: a <u>valid</u> kernel level extension providing kernel level driver information to said framework, wherein when an invalid kernel level extension is recognized said framework directs said <u>valid</u> kernel level extension to selectively restrict output of said media content.
- 3. (currently amended) The method as recited in Claim 2 wherein said <u>valid</u> kernel level extension matches no physical device on the client system.
- 4. (currently amended) The method as recited in Claim 2 wherein said <u>valid</u> kernel level extension comprises:

recognizing a kernel level recorder capturing an audio stream; and informing said framework of said kernel level recorder.

5. (original) The method as recited in Claim 1 wherein said framework will disable audio playback from the multimedia component until said components of the compliance mechanism are validated.

MOMI-018 2 Serial No.:10/772,031

Art Unit: 2132

Examiner: Kim, J.

6. (original) The method as recited in Claim 1 wherein said framework accesses a network to ensure that said components of the compliance mechanism are up to date.

7. (original) The method as recited in Claim 1 wherein said framework establishes

a monitoring thread which maintains a constant search for output devices.

8. (original) The method as recited in Claim 1 wherein said compliance

mechanism further comprises a bad boy list.

9. (original) The method as recited in Claim 1 wherein said multimedia

component is a media rendering or processing application.

10. (original) The method as recited in Claim 1 wherein said media content is

received from a source coupled with said client system, said source is from the group

consisting of:

a network, a personal communication device, a satellite radio feed, a cable

television radio input, a set-top box, an media device, a media storage device, a media

storage device inserted in a media device player, a media player application, and a media

recorder application.

11. (original) The method as recited in Claim 1 further comprising altering said

compliance mechanism in response to a change in a usage restriction, said usage

restriction comprising a copyright restriction or licensing agreement applicable to said

media content.

12. (original) A computer readable medium for storing computer implementable

instructions, said instructions for causing a client system to perform a method for

preventing unauthorized recording of media content on a Macintosh operating system

comprising:

MOMI-018

Serial No.:10/772,031

Art Unit: 2132

registering a compliance mechanism on a client system having said Macintosh operating system operating thereon, said compliance mechanism comprising:

a framework for validating components of said compliance mechanism on said client system;

a multimedia component opened by said framework, said multimedia component for preventing decryption of media content on said client system if said framework detects an invalid environment; and

a kernel level extension providing kernel level driver information to said framework;

disabling output of said media content on said client system having said Macintosh operating system operating thereon if a portion of said compliance mechanism is invalidated.

- 13. (original) The computer readable medium of Claim 12 wherein said instructions cause said client system to perform said method further comprising: authorizing said client system to receive said media content.
- 14. (original) The computer readable medium of Claim 12 wherein said kernel level extension matches no physical device.
- 15. (original) The computer readable medium of Claim 12 wherein said kernel level extension comprises:

recognizing a kernel level recorder capturing an audio stream; and informing said framework of said kernel level recorder.

16. (original) The computer readable medium of Claim 12 wherein said framework will disable audio playback from the multimedia component until said components of the compliance mechanism are validated.

MOMI-018 Serial No.:10/772,031 Art Unit: 2132 17. (original) The computer readable medium of Claim 12 wherein said framework accesses a network to ensure that said components of the compliance mechanism are up to date.

18. (original) The computer readable medium of Claim 12 wherein said framework establishes a monitoring thread which maintains a constant search for output devices.

19. (original) The computer readable medium of Claim 12 wherein said multimedia component is a media rendering or processing application.

20. (original) The computer readable medium of Claim 12 wherein said client system performs said method further comprising:

accessing an indicator corresponding to said media content for indicating to said compliance mechanism a usage restriction applicable to said media content.

21. (currently amended) The computer readable medium of Claim 12 wherein said client system performs said method further comprising:

altering said compliance mechanism [[is]] <u>in</u> response to changes in said usage restriction, said usage restriction a copyright restriction or licensing agreement applicable to said media content.

22. (original) The computer readable medium of Claim 12 wherein said media content is from a source coupled with said client system, wherein said source is from the group consisting of:

a network, a personal communication device, a satellite radio feed, a cable television radio input, a set-top box, an media device, a media storage device, a media storage device inserted in a media device player, a media player application, and a media recorder application.

Serial No.:10/772,031 Art Unit: 2132 23. (original) A system for preventing unauthorized recording of media content on a Macintosh operating system comprising:

means for registering a compliance mechanism on a client system having said Macintosh operating system operating thereon, said compliance mechanism comprising:

means for validating components of said compliance mechanism on said client system;

means for preventing decryption of media content on said client system if said framework detects an invalid environment; and

means for providing kernel level extension information to said framework; and means for disabling output of said media content on said client system having said Macintosh operating system operating thereon if a portion of said compliance mechanism is invalidated.

- 24. (original) The system as recited in Claim 23 further comprising: means for authorizing said client system to receive said media content.
- 25. (original) The system as recited in Claim 23 wherein said kernel level extension comprises:

means for recognizing a kernel level recorder capturing an audio stream; and means for informing said framework of said kernel level recorder.

26. (original) The system as recited in Claim 23 wherein said framework further comprises:

means for disabling audio playback from the multimedia component until said components of the compliance mechanism are validated.

27. (original) The system as recited in Claim 23 wherein said framework further comprises:

means for accessing a network to ensure that said components of the compliance mechanism are up to date.

MOMI-018 Examiner: Kim, J.

Serial No.:10/772,031

Art Unit: 2132

28. (original) The system as recited in Claim 23 wherein said framework further comprises:

means for maintaining a constant search for output devices.

29. (original) The system as recited in Claim 23 further comprising:

means for accessing an indicator for indicating to said compliance mechanism said usage restriction applicable to said media content, said indicator attached to said media content.

30. (original) The system as recited in Claim 23 further comprising:

means for altering said compliance mechanism in response to changes in said usage restriction, said usage restriction a copyright restriction or licensing agreement applicable to said media content.

31. (original) The system as recited in Claim 23 wherein said media content is from a source coupled with said client system, wherein said source is from the group consisting of:

a network, a personal communication device, a satellite radio feed, a cable television radio input, a set-top box, an media device, a media storage device, a media storage device inserted in a media device player, a media player application, and a media recorder application.
